MYH Certification of Infection Prevention

At MYH we pride ourselves on delivering excellent medical services in our community. As a part of these services we want to assure our patients that when they come to our centre, they are entering a space which abides by best practices in infection prevention and control. We put our patients' safety first by conducting the following:

- Cleaning of all clinical surfaces between patients and non-clinical surfaces with Viraclean regularly, the first ever cleaning solution approved by TGA for Coronavirus SARS-CoV-2 (COVID-19).
- Perspex hygiene guards at reception which are regularly cleaned.
- Thin-film on EFTPOS keypads changed regularly to minimise cross infection.
- Twice daily cleaning of all commonly touched surfaces.
- All staff is trained on evidence-based infection prevention and control. Clinical staff remain masked during work hours whilst this pandemic is ongoing.
- Requesting all patients to abide by the 1.5m social distancing rule inside the building – waiting room chairs are separated accordingly.
- Minimising wait times in waiting room and ensuring waiting room not full at any time.
- Allowing “Drive-through” Flu vaccination to minimise Waiting room use.
